SUGAR BEETS' BAD YIELD.

Missouri Product Contained Sugar

of Low Purity. REPUBLIC SPECIAL.

Washington, Sept. 9.-The Department of Agriculture publishes a report of progress tion, Andrew Schlake, a German farmer livof the beet-sugar industry for 1899. The foi- ing south of this city, was found this mornlowing comments are made upon samples submitted from the Southwest:

Arkansas—Thirteen samples have been examined during the three years from this State. The average percentage of sugar in the beet was 7.3, and the average coefficient of purity, 63.3. It is evident that sugar cannot be profitably made from sugar beets of this character.

Indiana—Two hundred and twenty samples received from Indiana showed that this State has practically the same rank as a susar-beet producer as Illinois.

Attention has already been called to the fact that in Indiana and Illinois a successful beet-sugar industry can be established only in the northern parts. It is not advasable to push the commercial growing of sugar-beets even so far south as the central pertions of these States.

Kansas—The climate of Kansas, as has been repeatedly pointed out, is not suitable. en repeatedly pointed out, is not suitable the growing of high-grade sugar teets

been repeatedly pointed out, is not suitable to the growing of high-grade sugar beets. The summers, as a rule, are too long and too dry. The data which have been secured from the ninery-thre samples received from that State confirm this statement.

Missouri-Missouri is one of the border States between the good and bad areas for successful beet culture. The 355 samples received showed beets of good average size, with a fair content of sugar, but a low purity. The general result of the study of the data received from Missouri was distincly unfavorable, and points to the fact that it is not a suitable region for the successful growing of beets.

New Mexico-Only a few samples were received from this Territory. The content of sugar in the beets from this region was favorable, and the purity almost up to the standard. In the commercial growing of beats in the standard in the commercial growing of sugar in the beets from this region was favorable, and the purity almost up to the standard. In the commercial growing of sugar beets in this Territory difficulties have been met which have discouraged the the growers to some extent, but it is believed that there are many areas in New Mexico where successful beet culture can be carried on.

Oklahoma-The data from this Territory are distinctly unfavorable. The conditions which obtain there are very much the same as in Kansas, and the Territory is not suitable to the growth of high-grade sugar beets.

About four weeks ago Miss Addle was one of a jolly party that went to Suburban Park for a pleasant evening. They left their rig outside of the grounds, and Miss Adele, as she did not want to be bothered with her purse, placed it carefully under the buggy seat. When it was time to go home, the party went to the rig, and the first thing Miss Adele did was to look for her purse. It was gone. Somebody said a walter had stolen it, and somebody else waiter han stolen it, and somebody cise suggested the arrest of the waiter. Al Blanchard and Mr. and Mrs. George Perci-val said that they saw Perbert Millard, a waiter, take the purse, and one of the young men in Miss Adele's party suggested young men ir Miss Adele's party suggested that Millard be arrested. The young woman demurred, but others insisted, and an officer was called and Millard arrested.

"Of course," she said yesterday, "if the Judge won't let me drop the case, I guess I'il have to go to Clayton. But I don't want to do it. I would rather let the purse go. Besides, I don't think I will ever get it, anyhow, no matter how often I go to court."
